

Soccer Unlimited

No limits to what this soccer game can do!

This game has just broken new ground as to what a soccer based game should be. From friendly matches to cups to practise matches, this game has features that would make a soccer enthusiast drool.

The game has been thoroughly polished and lives up to its name - Soccer Unlimited. I've spent so much time on this game it isn't even funny! The game features a variety of game modes, some of which were mentioned earlier. There is the 'friendly' mode which allows you to choose a team and pit yourself against another CPU-based team. You can choose from a variety of international countries and each country has its own "power" gauges. You can even customise your player kit according to designs you want like colours and home/away jerseys. You also have the 'cup' mode which puts you in the running for the biggest prize in mobile soccer - the Macrospace Cup!

Also included is a 'practise' mode which does exactly as it says. It teaches you the "art" of passing, tackling without causing a foul as well as running and scoring. A fun little extra the developers have added in is the target mode where you practise kicking and curling the ball towards a designated bulls eye on the pitch for points. You can even upload the points you get in this mode to Macrospace's online highscore table!

The only real problem I had with this game was the awkward controls. There are two types of controls in this game - holding the button down and running or clicking the button rapidly to kick the ball. I had a few problems with the game not recognising my clicks and had to switch the control mode to just holding down the running key. And another thing - this game is brutally hard. Never has England gone down 7-2 to Scotland as far as I can remember. :)

Other than that - this is a fantastic little game for soccer enthusiasts all over the world.

Details:

Vibration:	Yes	Sound:	Yes
Highscore:	Yes	Help:	Yes
Multiplayer:	No	Size:	64-89 KB

Rating:

Graphics:	9 / 10
